Project Name: NAIROBI RIVERS REHABILITATION AND RESTORATION PROGRAM: SEWERAGE
IMPROVEMENT PROJECT- PHASE 2 (NARSIP-II)

Supply and Delivery of 2 No. 4000L Vehicle Mounted Sewer Flushing Units for
Nairobi City Water and Sewerage Company

OCBN No: AWWDA/NARSIP-II/G/03A/2025

RESPONSE TO CLARIFICATIONS 1

No.	Reference Section	Bidders Question	AWWDA Response
1.	Section VII – Schedule of Requirements (Page 111)	<p>It is mentioned in the Tank Body Specification that the truck water quantity should be 3000L and the Sludge quantity should be 1,000L, this in our opinion is a mistake as normally the sludge qty is the higher amount and limiting the Sludge quantity to 1,000L will mean that the unit/s will lose a lot of operational time travelling to and from emptying the sludge and then returning to work.</p> <p>Please review the specifications and requirement for a more effective operational configuration.</p>	<p>The capacity indicated in the section is as per client's requirement</p>
2.	Section VII – Schedule of Requirements (Page 107)	<p>It is indicated (in clause 3. Transmission) a requirement for an "Automatic Transmission Gearbox without clutch pedal" - this is normally not readily available on trucks in Kenya; we will require sufficient time to identify a suitable truck to offer with an automatic gearbox.</p>	<p>The requirement is as indicated and bidders are expected to comply with the stated specifications.</p>
3.	Section VII – Schedule of Requirements (Page 107)	<p>It is indicated (in clause 3. Transmission) that the Drive configuration is a minimum of 4x4, please note 4x4 trucks with automatic gearbox are not readily available in Kenya.</p>	<p>The requirement is as indicated and bidders are expected to comply with the stated specifications.</p>
4.	Section VII – Schedule of	<p>Please consider that a 11,000 Kg GVW would be limiting for an effective Flushing Truck especially with an indicated front axle load of 3,700 kgs (min.)</p>	<p>The requirement in the bidding document is minimum GVW of 11,000 kg and bidders are at liberty to propose higher</p>

5.	Requirements (Page 107) Section VII – Schedule of Requirements (Page 112)	The requirement is for the tank to be fitted with a hydraulic tipping ramp to tip the tank with full load, inclined tanks (without tipping cylinder) are more reliable with a rear cleaning hatch provision, please advise if this design would be acceptable	GVW configurations provided all other technical requirements are met. The requirement is as indicated and bidders are expected to comply with the stated specifications. Accordingly, an inclined tank design without a hydraulic tipping cylinder would not be acceptable as it does not meet the stated requirement.
6.	General	Request for additional time	The reasons provided for clarifications does not result in changes to the essential elements of the Bidding Document hence the closing date remains unchanged.
